

Senior Business Analyst

Position Summary

The Senior Business Analyst is responsible for analyzing business processes and gathering business requirements for initiatives that support Farmer Mac's strategic objectives. The analyst in this position partners with the functional groups within the business organization to communicate and clarify business needs, contribute to development of long and short-term plans, and ensure processes and services are aligned with business needs. The analyst conducts business process analysis, needs assessments, and preliminary cost-versus-benefit assessment; brokers other IT services; and communicates trends and requirements with business and IT staff. The analyst uncovers client requirements via industry standard model-driven analysis techniques and documents and manages requirements via the approved processes, templates, and tools throughout the software development life cycle. Incumbents in this position are challenged to develop and maintain effective working relations with both business and IT in a way that demonstrates an understanding of business problems as well as IT strategies, issues, and priorities. This position requires extensive interaction with IT, other Farmer Mac business units, and occasionally external stakeholders.

The People You Will Work With

The position will report directly to the Manager of Enterprise Operations. The position will be part of Farmer Mac's Enterprise Operations team and directly liaise with members of the Farmer Mac IT and various other departments. Occasionally, the position will serve as a liaison with external stakeholders and implementation partners.

Where and When You Will Work

The position will be based in Farmer Mac's headquarters located at 1999 K Street NW, Washington, DC. Core business hours are Monday through Friday 8:30 am to 5:30 p.m. eastern time. Work outside of these times may be required for planned and unplanned activities to complete time sensitive projects or to attend off-site meetings or events. Periodic travel is expected of this position.

Primary Responsibilities and Duties

- Serve as team, project, or technical lead for digital transformation efforts across the enterprise, including but not limited to, finance, credit, business development, and operations disciplines

- Collaborate with business stakeholders and IT management to refine and execute enterprise technology strategy
- Collaborate with stakeholders from multiple disciplines to create alignment on how their objectives are enabled through technology solutions
- Translate requirements into clearly defined and easily understood documents such as executive-level presentations, project charters, use cases, and process flows
- Assess business processes and suggest areas of improvement for identified inefficiencies and/or potential risks
- Work with stakeholders to identify required changes or enhancements to existing software
- Solicit business and stakeholder input to refine project scope to effectively deliver desired business value within program timelines
- Lead testing efforts by creating initial test plans and conducting initial testing before User Acceptance Testing (UAT)
- Provide guidance on UAT to ensure optimal test coverage
- Ensure that issues are tracked reported on and resolved in a timely manner
- Assist in the enforcement of project deadlines and schedules
- Communicate and apply project management standards
- Assist in the leading of regular stand up meetings to facilitate collaboration on cross-functional teams
- Analyze and effectively communicate technical concepts to a non-technical audience
- Push creative thinking beyond the boundaries of existing industry practices and stakeholder/colleague mindsets
- Partner with leadership to manage the process of innovative change across the organization
- Train other innovators through both formal and informal training programs

Desired Skills and Qualifications

- Demonstrated project management experience (planning, execution, budget from inception to implementation), organizational, problem solving and analytical skills as it pertains to implementing software and providing operational support
- Demonstrated knowledge of the software development lifecycle and systems analysis required
- Demonstrated ability to reach consensus and signoff on requirements gathering deliverables

- Demonstrated ability to work in waterfall and/or Agile environments for software development
- Excellent oral and written communication skills to make effective presentations and interact effectively in a team setting as well as cross-team and cross-organization setting (involving external business partners and vendors)
- Natural team player that collaborates with peers and project teams to achieve company objectives
- Demonstrated ability to manage and collaborate with external vendors in the consulting space
- Proven self-starter with ability to operate with limited supervision

Education and Experience

- Bachelor's degree in Accounting, Finance, Mathematics, Statistics, Management Information Systems or similar discipline; Master's Degree a plus
- Experience working in the financial services industry
- Experience working with financial data
- Experience working with a broad range of technologies and enterprise systems
- Experience working with the Salesforce platform a plus
- Experience in the secondary mortgage industry a plus
- Project Management Professional (PMP) certification a plus
- Previous Consulting experience a plus
- Experience with Microsoft Team Foundation Server (TFS) a plus
- Experience with SQL Server and T-SQL a plus
- Proficient in MS Office Suite
- Minimum of 7 years of related experience
