In addition to historical information, this presentation includes forward-looking statements that reflect management’s current expectations for Farmer Mac’s future financial results, business prospects, and business developments. Forward-looking statements include, without limitation, any statement that may predict, forecast, indicate, or imply future results, performance, or achievements. Management’s expectations for Farmer Mac’s future necessarily involve a number of assumptions and estimates and the evaluation of risks and uncertainties. Various factors or events, both known and unknown, could cause Farmer Mac’s actual results to differ materially from the expectations as expressed or implied by the forward-looking statements. Some of these factors are identified and discussed in Farmer Mac’s Annual Report on Form 10-K for the year ended December 31, 2016, filed with the U.S. Securities and Exchange Commission (“SEC”) on March 9, 2017, Quarterly Report on Form 10-Q for the quarter ended March 31, 2017, filed with the SEC on May 10, 2017, and Quarterly Report on Form 10-Q for the quarter ended June 30, 2017, filed with the SEC on August 9, 2017, which are also available on Farmer Mac’s website (www.farmermac.com). In light of these potential risks and uncertainties, no undue reliance should be placed on any forward-looking statements expressed in this presentation. Any forward-looking statements made in this presentation are current only as of June 30, 2017, except as otherwise indicated. Farmer Mac undertakes no obligation to release publicly the results of revisions to any such forward-looking statements that may be made to reflect new information or any future events or circumstances, except as otherwise mandated by the SEC. The information contained in this presentation is not necessarily indicative of future results.
Use of Non-GAAP Financial Measures

This presentation is for general informational purposes only, is current only as of June 30, 2017, and should be read in conjunction with Farmer Mac’s Quarterly Report on Form 10-Q filed with the SEC on August 9, 2017. In the accompanying analysis of its financial information, Farmer Mac uses the following non-GAAP financial measures: core earnings, core earnings per share, and net effective spread. Farmer Mac uses these non-GAAP measures to measure corporate economic performance and develop financial plans because, in management’s view, they are useful alternative measures in understanding Farmer Mac’s economic performance, transaction economics, and business trends. These non-GAAP financial measures that Farmer Mac uses may not be comparable to similarly labeled non-GAAP financial measures disclosed by other companies. Farmer Mac’s disclosure of these non-GAAP financial measures is intended to be supplemental in nature, and is not meant to be considered in isolation from, as a substitute for, or as more important than, the related financial information prepared in accordance with GAAP.

Core earnings and core earnings per share principally differ from net income attributable to common stockholders and earnings per common share, respectively, by excluding the effects of fair value fluctuations. These fluctuations are not expected to have a cumulative net impact on Farmer Mac’s financial condition or results of operations reported in accordance with GAAP if the related financial instruments are held to maturity, as is expected.

Core earnings and core earnings per share also differ from net income attributable to common stockholders and earnings per common share, respectively, by excluding specified infrequent or unusual transactions that Farmer Mac believes are not indicative of future operating results and that may not reflect the trends and economic financial performance of Farmer Mac’s core business.

Farmer Mac uses net effective spread to measure the net spread Farmer Mac earns between its interest-earning assets and the related net funding costs of these assets. Net effective spread differs from net interest income and net interest yield because it excludes: (1) the amortization of premiums and discounts on assets consolidated at fair value that are amortized as adjustments to yield in interest income over the contractual or estimated remaining lives of the underlying assets; and (2) interest income and interest expense related to consolidated trusts with beneficial interests owned by third parties, which are presented on Farmer Mac’s consolidated balance sheets as “Loans held for investment in consolidated trusts, at amortized cost.”

05 Executive Summary

13 Farmer Mac Overview

26 Farmer Mac Financial Performance

33 Appendix – Farmer Mac

44 Appendix – Agricultural Industry
Farmer Mac Overview

**Farmer Mac was created in response to the agricultural credit crisis of the 1980s**

- Increase access to and reduce the cost of capital for the benefit of American agricultural and rural communities
- Provide financial solutions to a broad spectrum of the agricultural community

**Lines of Business**

- Farm & Ranch
- USDA Guarantees
- Rural Utilities
- Institutional Credit

**Diverse Product Suite**

- Loan purchases
- Wholesale financing
- Credit protection

**EXECUTIVE SUMMARY**

1987
- Farmer Mac initially chartered by Congress as an instrumentality of the United States

1996
- First major charter revision and expansion of authority (direct loan purchases)
- Outstanding business volume reaches $1 billion

1998
- Outstanding business volume reaches $1 billion

1999
- First listed on NYSE (AGM & AGM.A)
- Second major charter revision and expansion of authority (Rural Utilities)

2008
- Outstanding business volume reaches $10 billion

2015
- Outstanding business volume reaches $15 billion
Agricultural Real Estate Mortgage Market Structure

AS OF DECEMBER 31, 2016

FINANCIAL INVESTORS (Developing Market) | various institutional investors investing in agricultural assets (and seeking leverage)

(1) Eligible ag real estate mortgage market structure shown here includes the forecast for outstanding unpaid principal balance of first lien ag mortgage assets as of December 31, 2016 reduced by forty percent to estimate loans that would not qualify for Farmer Mac’s Farm & Ranch line of business.

(2) Source: FDIC Call Reports (ag banks), Federal Reserve Board of Governors (insurance companies and Farm Service Agency portion of non-bank lenders), and USDA, Economic Research Service forecast for remaining non-bank lenders adjusted for estimates of Farmer Mac eligibility; nominal dollars forecast for year-end 2016 on a prorated basis (February 2017).

(3) Source: Farm Credit Administration, Call Report data as of December 2016 adjusted for estimates of Farmer Mac eligibility.

(4) Sum of FCS, non-FCS, and Farmer Mac first lien ag real estate mortgage assets does not add up to the total due to the nature of Farmer Mac’s secondary market business model.

EXECUTIVE SUMMARY
Rural Utilities (RU) Cooperative Mortgage Market

(1) Core earnings and net effective spread are non-GAAP measures. For a reconciliation of core earnings to GAAP net income attributable to common stockholders and a reconciliation of net effective spread to GAAP net interest income, please refer to pages 36 and 38 of the “Appendix – Farmer Mac.”

(2) Delinquencies include loans held and loans underlying off-balance sheet Farm & Ranch Guaranteed Securities and LTSPCs that are 90 days or more past due, in foreclosure, or in bankruptcy with at least one missed payment, excluding loans performing under either their original loan terms or a court-approved bankruptcy plan.
Farmer Mac’s Investment Highlights

- **Quality Assets**
  - Rigorous underwriting standards
  - Low delinquencies
  - Low cumulative historical credit losses

- **Funding Advantage**
  - Finance assets through issuance of low-cost public debt
  - Issue at narrow, GSE spreads to U.S. Treasuries

- **Growth Prospects**
  - Robust worldwide demand for agricultural products
  - Increase market share through business development efforts
  - Significant wholesale financing opportunities

- **Operational Efficiency**
  - Overhead / outstanding business volume ~ 25 bps
  - Outstanding business volume ~$200 million per employee (81 employees)

- **Consistent Returns**
  - Core earnings growth
  - Annual core earnings return on equity ~ 15%
  - Dividend policy targeted at growing payouts of core earnings to ~ 30% by 2018
Farmer Mac
Overview
World population is expected to grow to 9.8 billion by 2050, while arable land per person is expected to decline over 40% in the same time period.

USDA projects a 75% increase in total production and consumption of major field crops between 2005 and 2050:
- 43% increase in world population
- Higher protein diets as incomes in developing countries increase

Productivity would need to nearly double by 2050 to feed the world:
- Thus, extremely high capacity utilization
- Creating significant “demand pull” over time

Source: USDA, Economic Research Service Global Drivers of Agricultural Demand and Supply, September 2014
Farmer Mac’s Unique Market Position

Farmer Mac enjoys a unique position, sharing in upside opportunity in strong markets and benefiting from downside protection and increased relative demand in weak markets

**Strong Market – Farmer Mac can participate in the upside**

- **Situation:** Credit is healthy, transaction volumes are high, and capital is plentiful
- **Impacts on Farmer Mac:**
  - Farmer Mac can benefit from higher industry volumes and healthy credit
  - However, when farm income is high and capital is plentiful, the relative value of access to GSE capital may be marginally lower
  - Earnings can benefit from lower credit costs, but spreads may be tighter

**Weak Market – Farmer Mac can benefit from loss protection and increased demand due to tighter credit conditions**

- **Situation:** Declining farm income, land values, and credit quality; less access to capital
- **Impacts on Farmer Mac:**
  - Farmer Mac can benefit from loss protection given its unique diversified geographic/commodity portfolio and its conservative underwriting standards
  - Farmer Mac can also benefit from the greater relative value of GSE capital in tighter credit market conditions
  - However, in bear markets, no entity will be immune to declining credit quality, although spreads may be more favorable
Farmer Mac’s Downside Protection

Conservative underwriting with significant focus on repayment strength and low LTVs
• Total Debt Coverage (TDC) ratio of at least 1.25x
• Generally maximum LTVs of 60% to 70%, but in practice average 40% to 45% on mortgages purchased
• Require minimum borrower net equity of 50% across all agricultural assets
• Significant scrutiny given to property access and access to water, among other items

Farmer Mac credits less likely to default as compared to the broader industry
• Farmer Mac is generally recognized as having the tightest credit requirements for ag mortgage loans
• Primary focus on repayment capacity through stressed input assumptions during underwriting process
• Farmer Mac is not a “lender of last resort”
• Farm Credit Administration is a strong safety and soundness regulator

Farmer Mac credits less likely to incur losses even when a default occurs
• Given Farmer Mac's portfolio average LTV of 44% as of June 30, 2017, average farm asset value losses would need to be in excess of 56% to begin to generate the first dollar of loss to Farmer Mac
  – “Expected losses” of farm asset values range from 0% to 30% for various commodity types in Farmer Mac’s base case scenario
  – Farmer Mac's “stress scenario losses” of farm asset values range from 17% to 50% for various commodity types
  – The 1980s agricultural credit crisis saw farm asset values decline approximately 23% from peak to trough

(1) Source: USDA, National Agricultural Statistics Service (as of August 2015).
Agricultural Risk Management Tools

Farmers today use a broad array of risk management tools, many of which were not available or not accepted during the ag credit crisis of the 1980s.

- Many now view costs of hedging simply as a cost of doing business
- Have learned from their parents' experiences in the 1980s
- Risk management includes revenue and cost protection and more sophisticated asset liability management

Revenue Hedging

- Crop insurance – approximately 92% of planted acres to principal crops carry some form of crop insurance
- Crop insurance premiums still federally subsidized and losses shared by the federal government
- Futures/forward sales – many producers use hedging instruments to sell grain crops forward at planting stage

Cost Hedging

- Feed costs hedged with futures/forwards
- Fertilizer and fuel costs can be similarly hedged
- Water availability can be provided via “water banks” and secondary sources of water, e.g. wells
- Water costs can also be hedged with forward purchase agreements

Debt service is better managed with low absolute leverage levels and better rate options

Core Earnings Drivers

Core earnings are primarily a direct function of three key factors:

Things to Consider

**BUSINESS VOLUME**
- Macro supply/demand for ag credit
- Farmer Mac business development success
- Impact of potential credit quality shocks
- Impact of potential rate shocks

**NET EFFECTIVE SPREAD**
- Macro supply/demand for ag credit
- Absolute level of interest rates
- Business mix
- Delinquencies

**CREDIT QUALITY**
- Idiosyncratic borrower impacts: death in family, divorce, & disease
- Commodity price volatility
- Acts of nature: droughts, disease, etc.

---

(1) Core earnings and net effective spread are non-GAAP measures. For a reconciliation of core earnings to GAAP net income attributable to common stockholders and a reconciliation of net effective spread to GAAP net interest income, please refer to pages 35-38 of the “Appendix – Farmer Mac.”

(1) Core earnings for 2014 include the effects of the cash management and liquidity initiative implemented in second quarter 2014 and the capital structure initiative under which Farmer Mac issued $150 million of preferred stock in advance of the planned March 30, 2015 redemption of all outstanding Farmer Mac II Preferred Stock and related FALCOnS. Each of these initiatives have been described in Farmer Mac’s prior SEC filings, including its Annual Reports on Form 10-K for the years ended December 31, 2014 and December 31, 2015, filed with the SEC on March 16, 2015 and March 10, 2016, respectively.

(2) Core earnings, core earnings per share, and net effective spread are non-GAAP measures. For a reconciliation of core earnings to GAAP net income attributable to common stockholders and core earnings per share to earnings per common share, and a reconciliation of net effective spread to GAAP net interest income, please refer to pages 35-38 of the “Appendix – Farmer Mac.”

(3) Book Value per Share excludes accumulated other comprehensive income.

(1) Net effective spread is a non-GAAP measure. For a reconciliation of GAAP net interest income to net effective spread, please refer to page 38 of the "Appendix – Farmer Mac."
Farmer Mac maintains an investment portfolio to provide back-up source of liquidity in excess of regulatory requirements
• Minimum of 90 days of liquidity required by regulation

$2.7 billion investment portfolio at June 30
• Cash and highly-rated investment securities
• Conservative portfolio goals
  – Minimize exposure to market volatility
  – Preservation of capital
  – Ready access to cash
• Provided 208 days of liquidity as of June 30, 2017

Farmer Mac also has $1.5 billion line of credit with U.S. Treasury
• Supports Farmer Mac’s guarantee obligations
• Farmer Mac has never used this line of credit
Interest Rate Risk

**Match fund asset purchases with liabilities that have similar interest rate characteristics**
- Duration and convexity matching
- Coupon type
- Reset frequency

**Manage pre-payment risk on mortgages**
- Issue a portfolio of callable and bullet debt across spectrum of maturities to obtain the appropriate match
- Can adjust effective asset and debt coupon and duration characteristics through the use of interest rate swaps or other derivatives

**Perform regular stress testing and disclose a variety of sensitivity measures**
- Duration Gap
- Market Value of Equity (MVE) Sensitivity
- Net Interest Income (NII) Sensitivity
- Measure these sensitivities’ impact on various capital metrics
Funding

Finance asset purchases with proceeds of debt issuances

• 20+ dealers
• Match-funding provides for stable net effective spread and immaterial interest rate risk

Farmer Mac’s debt securities carry privileges for certain holders

• 20% capital risk weighting
• Eligible collateral for Fed advances
• Legal investments for federally supervised financial institutions (banks, etc.)

<sup>(1)</sup> Common stock dividend annualized divided by quarter-end closing price
<sup>(2)</sup> Par value of annual dividend
Appendix – Agricultural Industry
Grain prices fell again in 2016 due to record plantings/yields; livestock also under pressure

- Ending stocks increased for most major grains due to another year of bumper production
- Grain exports increased by 1.4% despite a stronger dollar, driven by lower commodity prices
- All livestock and animal products sectors experienced lower prices due to large supplies and stiff foreign competition

Farm income fell nearly 16% in 2016

- 2017 would be the fourth consecutive year of declining income
- USDA currently projects a 9% decline in 2017

Average inflation-adjusted U.S. agricultural real estate values decreased 1.6% in 2016

- Corn Belt farmland values fell as much as 8% during 2016 as falling grain prices continued to pressure profitability
- Rest of U.S. land values remain stable to modestly increasing, led by demand in Pacific and Southern states

Land sales transactions continue to slow with lower income and declining land values

- However, demographic trend (average age of U.S. farmer >60 years) provides support of primary transaction volume

California drought largely tempered by wet winter storms

- Reservoirs and snow pack well above normal levels; soil moisture returning to normal
- Farmer Mac portfolio in Western states remained strong throughout drought conditions

(1) USDA, National Agricultural Statistics Service, nominals dollars, (as of August 2017); includes all farm and pasture land, irrigated and non-irrigated.
(2) USDA, Economic Research Service, nominal dollars (as of February 2017).
**USDA – Key 2017 Forecasts**

**Demand for U.S. agricultural products to increase**
- Demographic trends and a stabilizing global economy contributing to growth
- Lower commodity prices stimulating quantity demanded
- Total U.S. export values to increase 6% to $137 billion led by greater interest in livestock, poultry, and dairy exports

**U.S. farm income to decline approximately 9% to $62 billion in 2017**
- Grain prices remain range-bound at lower levels, but prices in the last quarter of the year will reflect this year’s harvest
- Despite increased production, livestock prices have been higher than the USDA’s initial projections so far in 2017
- Input costs are stable to modestly declining
  - Increasing labor, interest, and fuel costs largely offset by declines in feed, animal, seed, and fertilizer costs

**Average U.S. ag land values expected to stay flat to slightly higher**
- Declining land values in the corn belt have stabilized in 2017 (down -0.5% YTD)
  - USDA data shows year-over-year increases in Iowa and Wisconsin
- Rest of U.S. remains stable to increasing – demand steady in non-grain producing regions
  - Quickest growth seen in Pacific and Southern states

**U.S. agricultural mortgage market forecast to grow 7% in 2017**
